Data Flow Diagram (DFD)

A Data Flow Diagram (DFD) is a graphical representation that shows how data moves through a system, including the processes, data stores, external entities, and the data flows between them.

It helps in visualizing the flow of information, how inputs are transformed into outputs, and how data is stored and retrieved. DFDs are commonly used in software engineering and systems analysis to model system functionality.

Symbols for Data Flow Diagram

Symbol	Name	Function
	Data Flow	Used to connect processes to each other, to sources or sinks; the arrowhead indicates direction of data flow.
	Process	Performs some transformation of input data to yield output data.
	Source or Sink (External Entity)	A source of system inputs or sink of system outputs.
	Data Store	A repository of data; the arrowheads indicate net inputs and net outputs to store.
